

FiberTwist

The standard for
network termination

FiberTwist

innovative fiber & network demarcation

Setting the standard for fiber and network termination

The Fiber-to-the-Home (FTTH) market is growing rapidly. Now, more than ever, end-users want the network speeds fiber has to offer. This rapid growth also means challenges. For example, dealing with different OLTs in the field, upgrading the network (e.g., from 1G to 10G or Point-to-Point to GPON) or the scale of the deployment.

The FiberTwist is designed to provide the easiest, fastest and most friendly installation for both the network operators as well as the end-user.

'In one day we can install twice as many FiberTwist products compared to ONTs from other major vendors'

- An installer at a large German operator

Made of 90% recycled plastics!

As part of our sustainability program, the FiberTwist ONT is made of 90% recycled plastics, while still maintaining the same look and feel.

Same product, better for the planet!

One FTU for all deployments

The FiberTwist FTU is designed for and by installers ensuring a fast and easy installation. With a great variety of products (e.g., pigtails, gasblocker, patch in/out), most deployment scenarios are covered.

Every active unit of the FiberTwist fits on each FTU. Meaning for future upgrades or changes, the FTU can remain.

Twist on any active unit

The active unit of the FiberTwist can easily be connected to any FTU via a simple 'Twist'. This 'Twist' is so simple, installers are not even needed when activating or upgrading the fiber connection.

The FiberTwist is suitable for GPON, XGSPON, PtP and 10G PtP. Has 1 to 4 LAN ports from 1G to 10G, voice and CATV options.

Interoperability

The FiberTwist can 'talk to' the main OLTs. Allowing for mixed deployments!

Maximum flexibility

With a great variety of combinations, there is a FiberTwist model for each scenario!

True Do-It-Yourself

The FiberTwist allows for true DIY activation and upgrading. Saving greatly on installer costs.
