

FiberBox

The efficient network
termination solution

Future-proof network termination in a compact design

Today's Fiber-to-the-Home (FTTH) market is dynamic and challenging. The future is promising, yet it is not without hurdles. Deployment scenarios changing from greenfield to brownfield, end-users demanding greater bandwidth, the future choice for OLT vendor(s), and the growing importance of sustainability aspects.

The FiberBox is the perfect future-proof solution for operating in this dynamic landscape. It offers higher bandwidth, seamless OLT-ONT interoperability and sustainability, all in a compact and effective design.

Seamless interoperability

Equipped with TrueTalk™, the FiberBox eliminates concerns about OLT-ONT interoperability.

TrueTalk ensures seamless OLT-ONT interoperability by identifying and connecting to various OLTs within your network. This is achieved through our PON autosensing technology, utilizing a single firmware.

PON AUTOSENSING

Sustainable design

At Genexis, we highly value the importance of sustainable practices and therefore sustainability is always part of our focus during the development of new products.

For example, the FiberBox consists of 80% recycled plastics and complies with the EU Code of Conduct BBE with one of the lowest power consumption in the market.

A product for today and every day to come!

A design for all needs

The FiberBox has a compact and effective design, including an essential embedded dust cap to protect the fiber. The design is suitable for placement behind any FTU; wall-mount or desktop placement.

The FiberBox is currently available for GPON and XGS-PON networks and features 1 LAN port ranging from 1G to 10G.

Brownfield optimized

The FiberBox is the perfect solution for brownfield deployments. Suitable for placement behind any FTU!

Eco-friendly design

All Genexis products are designed for sustainability. Taking every aspect into consideration from power consumption to packaging.

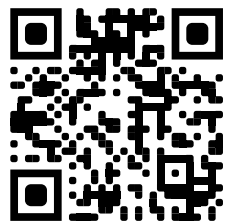

OLT agnostic

The FiberBox is equipped with TrueTalk™, which takes away concerns about OLT-ONT interoperability!
